Correction of Typos

Neural Moving Horizon Estimation for Robust Flight Control
IEEE Transactions on Robotics, vol. 40, pp. 639-659, 2024

Dear Readers,

We would like to correct a typographical error in the summation index of the auxiliary MHE objective in Eq. (15a). The same error is repeated in Appendix-B, Eq. (34).

In these equations, the gradient cross term is printed as

$$\sum_{k=t-N}^{t} \mathrm{Tr}\left(\boldsymbol{W}_k^T \boldsymbol{L}_k^{wx} \boldsymbol{X}_k\right).$$

The **corrected upper limit** is $t-1$. So, the term should be expressed as

$$\sum_{k=t-N}^{t-1} \mathrm{Tr}\left(\boldsymbol{W}_k^T \boldsymbol{L}_k^{wx} \boldsymbol{X}_k\right).$$

This is because the gradients of the process noise $\boldsymbol{W}_k$ are defined for $k=t-N,\cdots,t-1$. This indexing correction does not change the intended auxiliary MHE formulation, the resulting differential KKT equations, or the Kalman filter-based recursive gradient solver in Eqs. (17)-(20).

We apologize for any confusion caused by this typographical error.
